# INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.

PCT/IT 02/00681

I.	Basis	of the	report
----	-------	--------	--------

1. With regard to the elements of the international application (Replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report since they do not contain amendments (Rules 70.16 and 70.17)): **Description, Pages** as originally filed 1-8 Claims, Numbers received on 13.05.2004 with letter of 11.05.2004 1-4 **Drawings, Sheets** as originally filed 1/1 2. With regard to the language, all the elements marked above were available or furnished to this Authority in the language in which the international application was filed, unless otherwise indicated under this item. These elements were available or furnished to this Authority in the following language: the language of a translation furnished for the purposes of the international search (under Rule 23.1(b)). the language of publication of the international application (under Rule 48.3(b)). the language of a translation furnished for the purposes of international preliminary examination (under Rule 55.2 and/or 55.3). 3. With regard to any nucleotide and/or amino acid sequence disclosed in the international application, the international preliminary examination was carried out on the basis of the sequence listing: contained in the international application in written form. filed together with the international application in computer readable form. furnished subsequently to this Authority in written form. furnished subsequently to this Authority in computer readable form. The statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as filed has been furnished. The statement that the information recorded in computer readable form is identical to the written sequence listing has been furnished. 4. The amendments have resulted in the cancellation of: the description, pages: Nos.: the claims,

the drawings,

sheets:

# INTERNATIONAL PRELIMINARY

**EXAMINATION REPORT - SEPARATE SHEET** 

Reference is made to the following documents:

D1: US-A-5584285 D2: DE-C-759110 D3: EP-A-0626180

### **Point V**

- 1.1 D1 shows an apparatus for nebulising a liquid, e.g. for aerosol therapy (fig.4) having standard flap valves (140, fig.4). The subject-matter of claim 1 differs from the device of D1 in that a valve having a shutter movable between an open and a blocking position, said shutter being connected to a ring by deformable connecting elements between the ring and the shutter in order to anchor it to a tubular portion of the nebuliser. Moreover, the deformable connecting elements in claim 1 are spiral shaped and have a first end fastened peripherally to the shutter and a second end fastened to the ring. According to claim 1 the valve can be either an exhalation or inhalation valve.
- 1.2 Said construction is supposed to provide a valve with good sealing properties at rest and which oppose minimum resistance to opening/closing (see description page 4 1st paragraph). The problem to be solved by the invention can therefore be regarded as how to improve the valves of the apparatus of D1 to improve sealing and minimize closing/opening pressures of the valve.
- 1.3 A valve similar to the characterising portion of claim 1 is described in document D2, also a check valve for a respiratory appliance (see col.2 lines 1-2 "Atemventil"), (see figures, deformable connecting elements 3, ring 2 tubular portion 1 and shutter 5) as providing the same advantages as in the present application (see col.2 lines 54-63 and lines 69-81). Nevertheless the valve of D2 has straight connecting elements and not spiral shaped elements. Thus a skilled person combining the valve of D2 with the apparatus described in document D1 in order to solve the problem posed, would not arrrive at the subject-matter of claim 1. Therefore, the subject-matter of claim 1 appears to fulfill the requirements of Article 33(2) and (3) PCT, concerning novelty and inventive step.
- 2. Claims 2-4 are dependent on claim 1 and as such also meet the requirements of the PCT with respect to novelty and inventive step.

#### **CLAIMS**

1. Apparatus (1) for nebulising a liquid, in particular for aerosol therapy, of the type comprising:

a nebulising ampoule (2) provided with at least an opening (4;5) for aspirating and/or expelling air from/to the environment and with a mouthpiece (3) for dispensing a nebulisation of medical product;

a valve (6) for regulating a flow of air into and/or out of the ampoule (2), said valve (6) being positioned in correspondence with said opening (4;5)

-characterised in that the valve (6) is of the type comprising

a shutter (8) able to move between an operative blocking configuration corresponding to an obstruction of said opening (4;5) and an operative configuration of consent to the passage of the flow of air

a ring (9) connected to the shutter (8) to anchor it to a tubular portion (2a) of the ampoule (2), said tubular portion (2a) being positioned in correspondence with the opening (4,5)

a plurality of deformable connecting elements (10) between the ring (9) and the shutter (8) to allow said shutter (8) to move from said operative blocking configuration to said operative configuration of consent and vice versa, said movement being directly caused by an inspiration and/or expiration phase by a user

- Apparatus as claimed in claim 1, characterised in that the deformable elements (10) are spiral shaped and have a first end fastened peripherally to the shutter (8) and a second end fastened to the ring (9).
- 2. Apparatus as claimed in claim 1, characterised in that it comprises a holed protective element (11) positioned in correspondence with the opening

10

- (4;5) to prevent the introduction of foreign bodies into the ampoule (2), preventing any damage to the valve (6).
- 3. A. Apparatus as claimed in claim 1, characterised in that it comprises a second shutter (12) to cover an opening (5) of the ampoule (2) necessary to expel to the environment air exhaled by a user, said second shutter (12) being a deformable reed-like body having an end (12a) fastened in correspondence with the opening (5) and an end (12b) that is free to move away from the opening (5) to uncover it at least partially and allow the escape of air.
- 4.3. Apparatus as claimed in claim 1, characterised in that the valve (6) is associated with a so-called supplementary, or secondary, channel (7) of the nebuliser ampoule (2).
